

Thank you for choosing Virginia Green!

Follow these after service instructions to help your new grass grow strong and thick after your aeration & seeding.

Your Lawn's Recovery Timeline

TODAY DAYS 1-7		Water often - Light watering to a puddle 1-2 times each day. - Keep the soil consistently damp.
		Leave the plugs - The soil plugs are normal. - They'll break down naturally & feed your lawn.
		Remove leaves - Use a leaf blower if possible. - Avoid raking new seedlings.
WEEKS 2-3		Keep watering Once new grass reaches about 2", reduce watering to once daily.
		Don't mow yet - Wait until grass reaches 4.5". - Never cut below 3".
AFTER ONE MONTH		Spot seed if needed - Use your complimentary seed bag after Day 21. - Focus on traffic areas and thin spots.
	Growing a thicker lawn is a process Continue your normal mowing and watering routine while Virginia Green's regularly scheduled lawn care applications provide the nutrients needed for proper germination and strong root development, helping your new grass establish and thrive.	

Watering Guide

TIMEFRAME	WATERING
Days 1-21	Light watering 1-2 times daily
After 2" of growth	Water once daily
After establishment	Resume normal watering

PRO TIP: Water in the early morning for best results and less evaporation.

AVOID THESE MISTAKES

- Don't remove the soil plugs.**
They break down naturally.
- Don't mow too soon.**
Wait until grass is 4.5" tall.
- Don't stop watering before germination.**
It can take 21 days or longer.
- Don't apply additional seed for at least 3 weeks.**
Seedlings are just one shoot and need time to grow.
