Pre-Aeration & Seeding Checklist

Suggested, not required: Mow the lawn at a healthy height (2 to 2.5 inches) and remove the clippings. This helps to improve seed-to-soil contact. After seeding, please follow our after-service instructions to avoid mowing during the germination period.

Mark sprinkler heads, valve boxes, shallow electrical lines, pipe drains, and other underground objects with wire flags placed directly over the object. Do not use spray paint.

Have invisible dog fence wires marked every 2 to 3 feet by the provider or an electrician.

Remove lawn furniture, toys, hoses, and other moveable objects from the lawn.
